The FFFFFun Show is presented 'in the round'. A large blue tarp. is worked on as our presenter moves around engaging all children. Groups of up to 250 children have satisfactorily been entertained, but smaller groups of 130 or so children are more easily catered for.

Theatric and visual presentations of science ideas, usually with children participating in some way, make up the content of the show. Surprises, humour and many lateral extensions are used to keep the children AND teachers entertained and amused.

At some stage our presenter aims to have all children take part in some activity. Even teachers are expected to join in!

The presentation is fast-moving and sometimes challenging. Often questions are asked but not answered. They will be later, or on request. Teaching and learning concepts are presented for teachers to consider. Children are exposed to some new ways of learning. A strength of the FFFFFun Show is that our presenter is a practising teacher, currently working in schools with children.

We understand how hard it is to decide on booking a show 'sight unseen'. The best way to determine what you are getting is to call one of the other schools visited recently. They can help you decide whether this is the input you need to support your programs.

Of course, if you are not satisfied, you don't pay! If you are, you are likely to re-book the show immediately for next year, as many schools do!

We are flexible. If you have a requirement, we try to satisfy it.

**SCIENCE IS FUN!**
